

Amendments to the Claims:

This listing of claims will replace all prior versions and listings of claims in the application:

Listing of Claims:

- 5 1. (Currently Amended) A method comprising:
 creating a plurality of vaulting policies, each
 vaulting policy having one or more cycles specifying a
 movement of media to a destination location and a time to
 execute the cycle;
- 10 associating a first vaulting policy of the plurality
 to a first set of media; ~~and~~
 associating a second vaulting policy of the plurality
 to a second set of media, the second set of media
 comprising a subset of the first set of media, the second
15 vaulting policy superseding the first vaulting policy for
 the media contained in the subset; and
 vaulting at least portions of said first and second
 sets of media according to said plurality of vaulting
 policies.
- 20 2-5 (Canceled).
6. (Original) The method of claim 1, further comprising
 creating a media movement job based on at least the first
 vaulting policy, the media movement job comprising a destination
 for a second subset of media in the set and a time period to
25 perform the media movement.
7. (Original) The method of claim 6, wherein creating a
 media movement job comprises:
 obtaining backup job information from a backup
 application for one or more backup jobs; and
30 determining at least a portion of the second subset of

media by determining media used by the one or more backup jobs.

5 8. (Original) The method of claim 6, further comprising receiving a confirmation verifying completion of the media movement job for one or more media of the second subset.

9. (Original) The method of claim 8, further comprising determining one or more missing media based on the confirmation.

10 10. (Original) The method of claim 6, wherein the time period comprises a start time to start the media movement job and a due time to complete the media movement job.

15 11. (Original) The method of claim 6, further comprising creating a second media movement job based on the media movement job, the second media movement job created on a vaulting manager at a source location of at least a portion of the second subset of media.

12. (Original) The method of claim 6, further comprising creating a second media movement job based on the media movement job, the second media movement job created on a vaulting manager at the destination for the second subset of media.

20 13. (Original) The method of claim 1, wherein the time for each of the one or more cycles comprises a relative number of days after data is written to a medium.

25 14. (Original) The method of claim 1, wherein creating a plurality of vaulting policies comprises for each vaulting policy, setting a time period for protecting data.

15. (Original) The method of claim 1, wherein each of the destination locations for the one or more cycles comprises one

of a backup device, an onsite vault, and an offsite vault.

16. (Currently Amended) A method comprising:

receiving backup job information from a backup application for one or more backup jobs; ~~and~~

5 creating a media movement job for a set of media based on the backup job information and one or more vaulting policies, the media movement job comprising a destination ~~for a~~ for the set of media and a time period to perform the media movement; and

10 moving the set of media based on said media movement job.

17. (Original) The method of claim 16, wherein creating the media movement job comprises:

15 determining media used by the one or more backup jobs based on the backup job information; and

applying the one or more vaulting policies to at least a portion of the media used by the one or more backup jobs.

18. (Original) The method of claim 16, wherein the time period comprises a start time to start the media movement job and
20 a due time to complete the media movement job.

19. (Currently Amended) The method of claim 16, further comprising:

25 determining media to be removed from a backup device associated with the backup application based on the media movement job; and

presenting to a user a list of the media to be removed from the backup device.

20. (Currently Amended) A system comprising:

30 a plurality of vaulting policies, each vaulting policy having one or more cycles specifying a movement of media to

a destination location and a time to execute the cycle; and
a user interface to configure the plurality of vaulting policies and to associate each of the vaulting policies to a set of media; and

5 logic, communicatively coupled to the vaulting policies, to determine a vaulting policy of the plurality of vaulting policies to apply to a medium based on a set membership of the medium, wherein a vaulting policy for a subset supersedes a vaulting policy for a set.

10 21. (Canceled).

22. (Currently Amended) The system of ~~claim 21~~ claim 20, further comprising:

15 an integration agent to receive backup job information for a plurality of backup jobs from a backup application; and

20 wherein said logic is further to create a media movement job based on at least one of the plurality of vaulting policies and the backup job information, the media movement job comprising a destination for a first set of media and a time period to perform the media movement.

23. (Currently Amended) The system of ~~claim 21~~ claim 20, wherein said user interface is further configured to receive a confirmation for the media movement job specifying completion of the media movement job for one or more media in the first set.

25 24. (Currently Amended) The system of ~~claim 21~~ claim 20, further comprising vaulting information comprising a current location of one or more media.

25. (Original) At least one machine-readable medium having stored thereon sequences of instructions, which, when executed

by a machine, cause the machine to perform the actions:

creating a plurality of vaulting policies, each vaulting policy having one or more cycles specifying a movement of media to a destination location and a time to execute the cycle;

associating a first vaulting policy of the plurality to a first set of media; and

associating a second vaulting policy of the plurality to a second set of media, the second set of media comprising a subset of the first set of media, the second vaulting policy superseding the first vaulting policy for the media contained in the subset.

26. (Currently Amended) The medium of claim 25, further comprising instructions, which when executed by the machine, cause the machine to perform the action of creating a media movement job based on at least the first vaulting policy, the media movement job including a destination for a second subset of media in the first set and a time period to perform the media movement.

27. (Original) The medium of claim 25, further comprising instructions, which when executed by the machine, cause the machine to perform the action of receiving a confirmation verifying completion of the media movement job for one or more media in the second subset.
